

ME 2580 Example #37: (Rigid Body Kinematics – Relative Acceleration)

Given: $R = 3$ (in), $L = 6$ (in), $\theta = 30$ (deg)

$$\omega_{OA} = \dot{\theta} = 100 \text{ (rpm) (CCW)}$$

$$\approx 10.472 \text{ (r/s)}$$

$$\alpha_{OA} = \dot{\omega}_{OA} = -5 \text{ (r/s}^2\text{) (CW)}$$

Find: α_{AB} , $a_B = \ddot{s}$

Solution:

From the triangle formed by the mechanism,

$$\boxed{R \sin(\theta) = L \sin(\phi)} \Rightarrow \boxed{\phi = \sin^{-1}\left(\frac{R \sin(\theta)}{L}\right)_{\theta=30 \text{ (deg)}} = 14.4775 \text{ (deg)}}$$

Using the **relative velocity** equation, the following results were found in Example #32.

$$\boxed{\omega_{AB} \approx -4.68 \underline{k} \text{ (rad/s)}} \quad \boxed{v_B \approx -22.7 \underline{i} \text{ (in/s)} \approx -1.89 \underline{i} \text{ (ft/s)}}$$

Using the **relative acceleration** equation, write

$$\boxed{a_B = a_A + a_{B/A}}^*$$

where

$$\boxed{a_B = a_B \underline{i}}$$

$$\begin{aligned} a_A &= a_{A/O} = [\alpha_{OA} \times r_{A/O}] - [\omega_{OA}^2 r_{A/O}] \\ &= [-5 \underline{k} \times 3(\cos(30) \underline{i} + \sin(30) \underline{j})] - 3\omega_{OA}^2 (\cos(30) \underline{i} + \sin(30) \underline{j}) \\ &= -15(-\sin(30) \underline{i} + \cos(30) \underline{j}) - 3\omega_{OA}^2 (\cos(30) \underline{i} + \sin(30) \underline{j}) \\ &\Rightarrow \boxed{a_A \approx -277.411 \underline{i} - 177.484 \underline{j} \text{ (in/s}^2\text{)}} \end{aligned}$$

$$\begin{aligned} a_{B/A} &= [\alpha_{AB} \times r_{B/A}] - [\omega_{AB}^2 r_{B/A}] \\ &= [\alpha_{AB} \underline{k} \times 6(\cos(\phi) \underline{i} - \sin(\phi) \underline{j})] - 6\omega_{AB}^2 (\cos(\phi) \underline{i} - \sin(\phi) \underline{j}) \\ &= 6\alpha_{AB} (\sin(\phi) \underline{i} + \cos(\phi) \underline{j}) + (-127.416 \underline{i} + 32.8985 \underline{j}) \\ &\Rightarrow \boxed{a_A \approx (6\alpha_{AB} \sin(\phi) - 127.416) \underline{i} + (6\alpha_{AB} \cos(\phi) + 32.8985) \underline{j}} \end{aligned}$$

Substituting back into the relative acceleration equation (*) gives the scalar equations:

$$\boxed{a_B = -277.411 + 6\alpha_{AB} \sin(\phi) - 127.416}$$

$$\boxed{0 = -177.484 + 6\alpha_{AB} \cos(\phi) + 32.8985}$$

Solving the equations: \Rightarrow

$$\boxed{\alpha_{AB} \approx 24.9 \underline{k} \text{ (r/s}^2\text{)}} \\ \boxed{a_B \approx -367 \underline{i} \text{ (in/s}^2\text{)} \approx -30.6 \underline{i} \text{ (ft/s}^2\text{)}}$$
