

### Elementary Dynamics Example #37: (Rigid Body Kinematics – Relative Acceleration)

**Given:**  $R = 3$  (in),  $L = 6$  (in),  $\theta = 30$  (deg)

$$\omega_{OA} = \dot{\theta} = 100 \text{ (rpm) (CCW)}$$

$$\approx 10.472 \text{ (r/s)}$$

$$\alpha_{OA} = \dot{\omega}_{OA} = -5 \text{ (r/s}^2\text{) (CW)}$$

**Find:**  $\alpha_{AB}$ ,  $a_B = \ddot{s}$

**Solution:**

From the triangle formed by the mechanism,

$$\boxed{R \sin(\theta) = L \sin(\phi)} \Rightarrow \boxed{\phi = \sin^{-1}\left(\frac{R \sin(\theta)}{L}\right)_{\theta=30 \text{ (deg)}} = 14.4775 \text{ (deg)}}$$

Using the **relative velocity** equation, the following results were found in Example #32.

$$\boxed{\omega_{AB} \approx -4.68 \text{ k (rad/s)}} \quad \boxed{v_B \approx -22.7 \text{ i (in/s)} \approx -1.89 \text{ i (ft/s)}}$$

Using the **relative acceleration** equation, write

$$\boxed{a_B = a_A + a_{B/A}}^*$$

Here,

$$\boxed{a_B = a_B \text{ i}}$$

$$\begin{aligned} a_A &= a_{A/O} = [\alpha_{OA} \times r_{A/O}] - [\omega_{OA}^2 r_{A/O}] \\ &= [-5 \text{ k} \times 3(\cos(30) \text{ i} + \sin(30) \text{ j})] - 3\omega_{OA}^2 (\cos(30) \text{ i} + \sin(30) \text{ j}) \\ &= -15(-\sin(30) \text{ i} + \cos(30) \text{ j}) - 3\omega_{OA}^2 (\cos(30) \text{ i} + \sin(30) \text{ j}) \\ &\Rightarrow \boxed{a_A \approx -277.411 \text{ i} - 177.484 \text{ j}} \text{ (in/s}^2\text{)} \end{aligned}$$

$$\begin{aligned} a_{B/A} &= [\alpha_{AB} \times r_{B/A}] - [\omega_{AB}^2 r_{B/A}] \\ &= [\alpha_{AB} \text{ k} \times 6(\cos(\phi) \text{ i} - \sin(\phi) \text{ j})] - 6\omega_{AB}^2 (\cos(\phi) \text{ i} - \sin(\phi) \text{ j}) \\ &= 6\alpha_{AB} (\sin(\phi) \text{ i} + \cos(\phi) \text{ j}) + (-127.416 \text{ i} + 32.8985 \text{ j}) \\ &\Rightarrow \boxed{a_{B/A} \approx (6\alpha_{AB} \sin(\phi) - 127.416) \text{ i} + (6\alpha_{AB} \cos(\phi) + 32.8985) \text{ j}} \end{aligned}$$

Substituting back into the relative acceleration equation (\*) gives the scalar equations:

$$\boxed{\begin{aligned} a_B &= -277.411 + 6\alpha_{AB} \sin(\phi) - 127.416 \\ 0 &= -177.484 + 6\alpha_{AB} \cos(\phi) + 32.8985 \end{aligned}}$$

Solving the equations:  $\Rightarrow$  
$$\boxed{\begin{aligned} \alpha_{AB} &\approx 24.9 \text{ k (r/s}^2\text{)} \\ a_B &\approx -367 \text{ i (in/s}^2\text{)} \approx -30.6 \text{ i (ft/s}^2\text{)} \end{aligned}}$$
